EDUCATION

Texas A&M University

Bachelor of Science in Computer Science, Minors in Statistics and AI in Business

College Station, TX

August 2023 – May 2027

- GPA: 3.76/4.00

EXPERIENCE

AI Researcher

January 2026 – Present

Dream Lab

College Station, TX

- Contributed to AnnoMath, an AI-powered multimodal math tutoring system that annotates handwritten student work; user study showed significant reductions in visual clutter and increased engagement (**p = 0.0021**)
- Implemented multiple annotation types (TypeScript, React, tldraw) covering ~22% of annotation occurrences, identified via frequency analysis of **30 openly coded** instructional videos
- Developed React/TypeScript frontend logic to control rendering of AI-generated tutoring outputs from OpenAI API

Lead Software Engineer

August 2025 – December 2025

Aggies Create

College Station, TX

- **Led a 3 person team** through data-access constraints by training and validating a Random Forest model on simulated order data (**98% accuracy** in internal testing), establishing technical feasibility for future deployment
- Programmed a personalized product recommendation quiz (HTML, CSS, JavaScript) designed for Shopify integration
- Directed rebranding and workflow, aligning technical components with brand identity under a compressed timeline

Software Engineering Intern

September 2024 – May 2025

Signify Health

College Station, TX

- Developed Signify Hex, a full-stack data visualization tool (React/TypeScript, Uber H3, Go, PostgreSQL) connecting medical providers with patients and increasing provider efficiency, through Aggies Create
- Implemented Redis-based WebSocket change tracking with a configurable batching threshold, **cutting frontend refresh frequency by ~10x** during high-volume updates
- Built travel radius overlays using Mapbox and Uber H3 to render reachability for **10,000+ providers nationwide**, leveraging H3's aperture-7 hierarchy to **cut cell-intersection checks by ~7x**
- Enhanced UX by adding hover interactions, dark mode, and dynamic data fetching via gRPC
- Presented live demos to Signify Health software engineering leadership and **awarded 1st place** among consultancy projects at the Aggies Create Innovation Expo

Web Officer and Software Engineer Intern

February 2024 – February 2025

Engineering Teaching Assistants Organization (TAO)

College Station, TX

- Built TAO website (React, Node.js, Tailwind CSS) for **10,000+ viewers** with fellow SWE interns
- Performed regular code reviews and reviewed pull requests to maintain consistent code quality

PROJECTS

Pearl Tea POS System | AWS, Java, JavaFX, PostgreSQL, Node.js/Express

September 2025 – December 2025

- Built an object-oriented POS system using JavaFX and PostgreSQL database hosted on AWS, customer and manager views for inventory and order management across **120+ menu items**, following the Waterfall model
- Migrated the desktop application into a web-based architecture using Agile development practices, built RESTful APIs with Node.js/Express and led deployment on Render with secure authentication
- Debugged and optimized asynchronous API workflows by implementing a multi-layer caching system, **reducing calls per page load by over 50%** and eliminating redundant calls
- Integrated Deepgram's Text-to-Speech (TTS) API and built a drink recommendation system based on weather to enhance **accessibility** and user experience

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, Go, C++, R, HTML/CSS

Web Frameworks & Libraries: React, Next.js, Node.js/Express, Tailwind CSS, Bootstrap, JavaFX, tldraw, Pandas, NumPy, Matplotlib, Seaborn, PyTorch, Scikit-learn, XGBoost, OpenGL, GLSL, gRPC, Selenium

Databases & Cloud: PostgreSQL, AWS, Redis, Render, Mapbox, Uber H3

Tools & APIs: Git, GitHub, Docker, Figma, Jira, Deepgram, Microsoft Azure Translator, i18n
